

Time-of-Flight high-accuracy proximity sensor expansion board based on the VL53L4CD for STM32 Nucleo

Features

- VL53L4CD Time-of-Flight high-accuracy proximity sensor
- Accurate absolute ranging distance, independent of the reflectance of the target
- 0.25, 0.5, and 1 mm spacers to simulate air gaps
- Two different cover glasses to protect the sensor from dust
- Compatible with STM32 Nucleo development boards
- Equipped with Arduino UNO R3 connectors
- Full system software supplied, including code examples and graphical user interface
- · RoHS, CE, UKCA, and China RoHS compliant

Description

The X-NUCLEO-53L4A1 is an expansion board for any STM32 Nucleo board equipped with the Arduino R3 connectors. It provides a complete evaluation kit that allows you to learn, evaluate, and develop applications using the VL53L4CD Time-of-Flight high-accuracy proximity sensor.

The expansion board is delivered with a cover glass holder in which you can fit three different spacers of 0.25, 0.5, and 1 mm height below the cover glass to simulate various air gaps. A small oval cover glass fitting the sensor is included.

Several ST expansion boards can be stacked through the Arduino connectors, which allow, for example, the development of VL53L4CD applications with Bluetooth or Wi-Fi interfaces.

Product summary		
Time-of-Flight high- accuracy proximity sensor expansion board based on the VL53L4CD for STM32 Nucleo	X-NUCLEO-53L4A1	
Time-of-Flight sensor software expansion for STM32Cube	X-CUBE-TOF1	
STM32 Nucleo-64 development board with STM32F401RE MCU	NUCLEO-F401RE	
Applications	Personal Electronics - Audio and Video/Gaming and Drones/Virtual - Augmented Reality/ Wearable

2 Laser safety considerations

The VL53L4CD contains a laser emitter and the corresponding drive circuitry.

The laser output is designed to remain within Class 1 laser safety limits under all reasonable foreseeable conditions, including single faults, in compliance with the IEC 60825-1:2014 (third edition).

The laser output remains within Class 1 limits as long as you use the STMicroelectronics recommended device settings and respect the operating conditions specified in the data sheet.

The laser output power must not be increased and no optics should be used with the intention of focusing the laser beam.

3 Optional VL53L4CD breakout boards

The SATEL-VL53L4CD is designed to connect remotely the VL53L4CD sensor to any type of electronic controller.

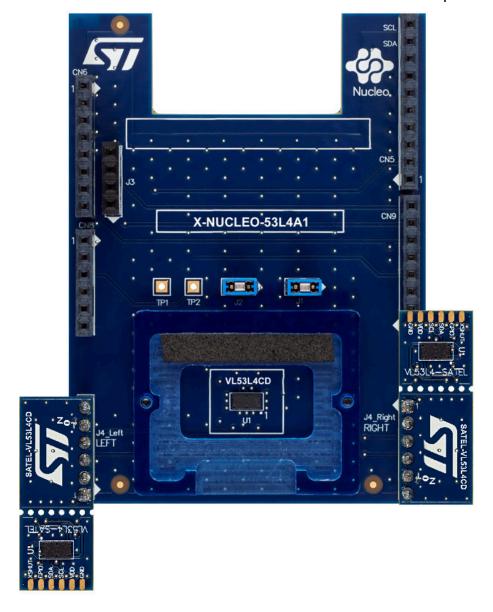

Attention:

The VL53L4CD is delivered with a liner to prevent potential foreign material from piercing the module holes during the assembly process. Remove this liner before use.

The VL53L4CD breakout boards can be directly plugged onto the X-NUCLEO-53L4A1 expansion board through two six-pin connectors (Figure 2) or through flying wires (Figure 3).

You can buy the breakout boards separately as SATEL-VL53L4CD. This order code package includes two breakout boards.
