### Description

The STM32W RF Control Kit is a low-cost and quick way to get started using STM32W-based point-to-point wireless control applications.

It includes everything required by beginners and experienced users to start developing RF control systems. The STM32W RF Control Kit includes one remote board and one receiver board (USB dongle), both using the STM32W microcontroller packaged in a VFQFPN48 for the remote board and VFQFPN40 for the USB dongle.

Both boards are also fitted with an STM32F103 microcontroller providing an easy-to-connect solution between a USB link to the PC world.

Debug capabilities are provided by a mini-JTAG connector interface on the remote board (not fitted).

Free, ready-to-run application firmware are provided at [www.st.com/stm32w\\_rfcontrol](http://www.st.com/stm32w_rfcontrol).

## 1 System requirements

- Windows® PC (XP)
- USB type A to mini-B cable

## 2 Development toolchain

- IAR Embedded Workbench® for ARM®: Integrated development environment and optimizing C/C++ compiler for ARM
- GNU Compiler Collection (GCC) compiler system

## 3 Demonstration software

Demonstration software is pre-loaded in the board's Flash memory for easy evaluation of RF communication in Standalone mode. For more information and to download the latest version available, please refer to [www.st.com](http://www.st.com).
