

4 A peak step-down switching regulator

Features

- 4 A peak output current
- 4.0 V to 18 V input voltage
- Output voltage adjustable from 0.8 V
- 850 kHz switching frequency
- Internal soft-start
- Integrated 95 mΩ and 69 mΩ Power MOSFETs
- All ceramic capacitor
- Power Good or enable
- Cycle by cycle current limiting
- Current fold back short circuit protection
- VFQFPN4x4-8L, HSOP-8 and SO-8 and packages

Applications

- μP/ASIC/DSP/FPGA core and I/O supplies
- Point of load for: STB, TVs, DVD
- Optical storage, Hard disk drive, Printers, Audio/Graphic cards

Description

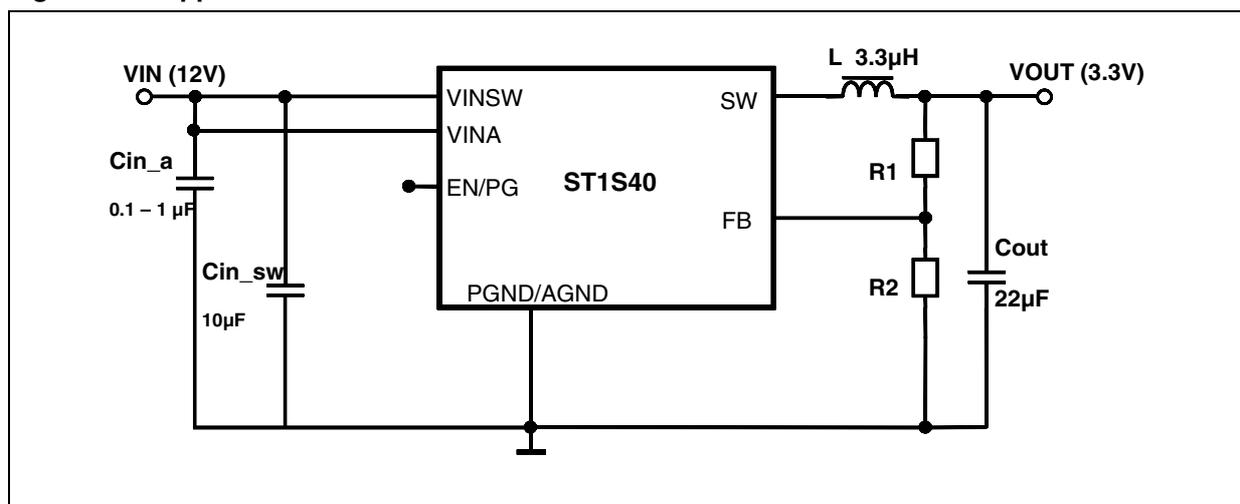

The ST1S40 is an internally compensated 850 kHz fixed-frequency PWM synchronous step-down regulator. ST1S40 operates from 4.0 V to 18 V input, while it regulates an output voltage as low as 0.8 V and up to V_{IN} .

The ST1S40 integrates 95 mΩ high side switch and 69 mΩ synchronous rectifier allowing very high efficiency with very low output voltages.

The peak current mode control with internal compensation delivers very compact solution with a minimum component count.

The ST1S40 is available in VFQFPN 4mm x 4mm 8 leads package, HSOP-8 and standard SO-8.

1.2 Pin description

Table 1. Pin description

N.		Type	Description
VFQFPN and HSOP8	S08-BW		
1	3	VINA	Unregulated DC input voltage
2	4	EN/PG	Enable input. With EN higher than 1.2V the device in ON and with EN lower than 0.4V the device is OFF (ST1S40lxx). Open drain Power Good (POR) pin. It is released (open drain) when the output voltage is higher than $0.92 * V_{OUT}$. If the output voltage is below $0.92 * V_{OUT}$, the PG pin goes to low impedance immediately. If PG is not used, it can be left floating or to GND (ST1S40xx).
3	5	FB	Feedback input. Connecting the output voltage directly to this pin the output voltage is regulated at 0.8V. To have higher regulated voltages an external resistor divider is required from Vout to FB pin.
4	6	AGND	Ground
5	-	NC	
6	8	VINSW	Power input voltage
7	1	SW	Regulator output switching pin
8	2	PGND	Power ground
-	7		Ground

Table 4. Electrical characteristics (continued)

Symbol	Parameter	Test condition	Values			Unit
			Min	Typ	Max	
Power Good						
PG	PG threshold			92		%V _{FB}
	PG output voltage low	Isink=6 mA open drain			400	mV
Soft start						
T _{SS}	Soft start duration			1		ms
Protection						
T _{SHDN}	Thermal shutdown			150		°C
	Hysteresis			15		

1. Specification referred to T_J from -40 to +125°C. Specification in the -40 to +125°C temperature range are assured by design, characterization and statistical correlation.
2. Guaranteed by design.

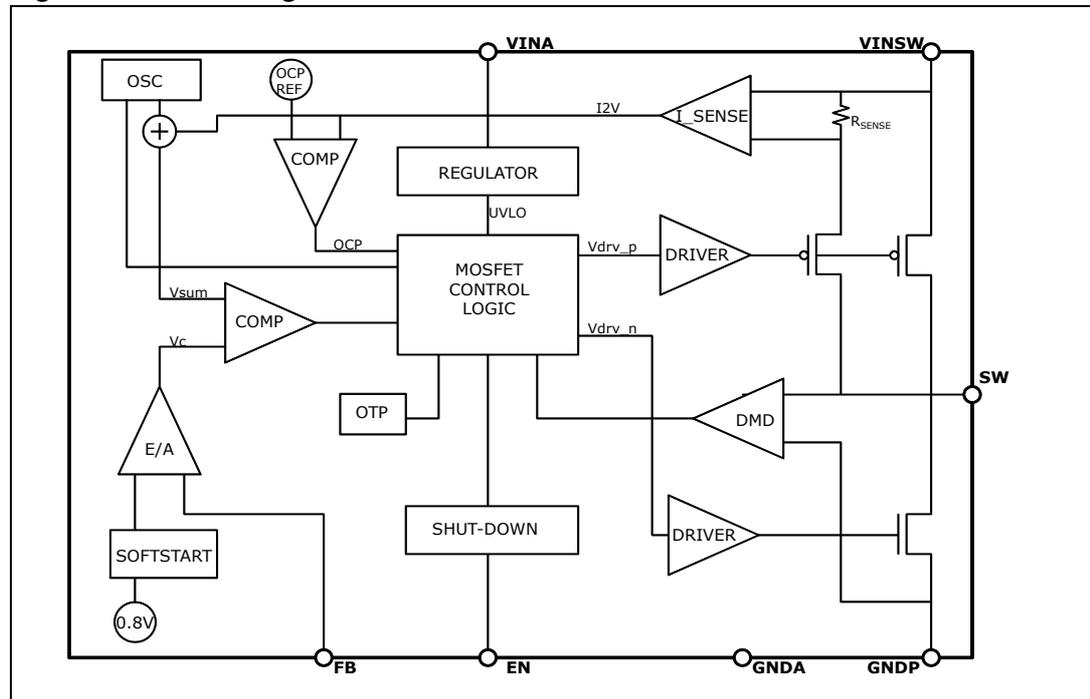

5 Functional description

The ST1S40 is based on a “peak current mode”, constant frequency control. The output voltage V_{OUT} is sensed by the feedback pin (FB) compared to an internal reference (0.8V) providing an error signal that, compared to the output of the current sense amplifier, controls the ON and OFF time of the power switch.

The main internal blocks are shown in the block diagram in [Figure 3](#). They are:

- A fully integrated oscillator that provides the internal clock and the ramp for the slope compensation avoiding sub harmonic instability
- The soft start circuitry to limit inrush current during the start up phase.
- The Transconductance Error Amplifier with integrated compensation network
- The pulse width modulator and the relative logic circuitry necessary to drive the internal power switches.
- The drivers for embedded p-channel and n-channel power MOSFET switches.
- The high side current sensing block.
- The low side current sense to implement diode emulation.
- A voltage monitor circuitry (UVLO) that checks the input and internal voltages.
- A thermal shutdown block, to prevent thermal run away.
