

Pivariety Color Global Shutter Camera Module for Raspberry Pi

2MP OG02B10
(SKU: B0348)

QUICK START GUIDE

SPECS

Image Sensor	2MP OG02B10
Max. Resolution	1600Hx1300V
Pixel Size	3um x 3um
Optical Format	1/2.9"
	Mount: M12
	Focal length: 2.8mm±5%
	F.NO: 2.8
	FOV: 110deg (H)
IR Sensitivity	Integral IR filter, visible light only
Frame Rate	1600x1300@60fps; 1600x1080@80fps; 1280x720@120fps
Sensor Output Format	RAW10, RAW8
	The output image format of JPG, YUV420, RAW, DNG
ISP Output Format	The output video format of MJPEG, H.264
Interface Type	2-Lane MIPI
Adapter Board Size	40mmx40mm
Board Size	40mmx40mm

SOFTWARE

1. Driver Installation

```
wget -O install_pivariety_pkgs.sh https://github.com/ArduCAM/ArduCam-Pivariety-V4L2-Driver/releases/download/install_script/install_pivariety_pkgs.sh
```

```
chmod +x install_pivariety_pkgs.sh
```

```
./install_pivariety_pkgs.sh -p kernel_driver
```

press **y** to reboot

NOTE: The kernel driver installation only supported by the latest version 5.10. For other kernel versions, please go to our Doc page: <https://www.arducam.com/docs/cameras-for-raspberry-pi/pivariety/how-to-install-kernel-driver-for-pivariety-camera/#2-how-to-build-raspberry-pi-kernel-driver-for-arducam-pivariety-camera>

You can also visit this doc page to refer to the hardware connection: <https://www.arducam.com/docs/cameras-for-raspberry-pi/pivariety/pivariety-og02b10-2mp-color-global-shutter-camera-module/>

2. Test the Driver and Camera

After you've finished the hardware assembly and driver installation, you can test whether the camera is detected and working.

• View the Status of Driver and Camera

```
dmesg | grep arducam
```

It will display **arducam-pivariety** if driver installed successfully and **firmware version** if the camera can be detected. The display should be **probe failed** if the camera can't be detected, you might have to check the ribbon connection, then reboot the Raspberry Pi.

• View the Video Node

The Pivariety camera modules are emulated as the standard video device under **/dev/video*** node, so you can use the **ls** command for listing the contents in the **/dev** folder.

```
ls /dev/video* -l
```

Since the camera module is V4L2 compliant, you can use the V4L2 controls to list the supported color space, resolutions, and frame rates.

```
v4l2-ctl --list-formats-ext
```

NOTE: Although V4L2 interface is supported, only RAW format images can be obtained, without ISP support.

3. Official Libcamera App Installation

```
./install_pivariety_pkgs.sh -p libcamera_dev
```

```
./install_pivariety_pkgs.sh -p libcamera_apps
```

4. Capture Image and Record Video

• Capture image

For example, preview for **5s** and save the image named **test.jpg**

```
cd libcamera-apps/build
```

```
./libcamera-still -t 5000 -o test.jpg
```

• Record video

For example, record a **H.264 10s** video with the frame size **1920W x 1080H**

```
cd libcamera-apps/build
```

```
./libcamera-vid -t 10000 --width 1920 --height 1080 -o test.h264
```

• Plugin gstreamer installation

Install gstreamer

```
sudo apt update
```

```
sudo apt install -y gstreamer1.0-tools
```

Preview

```
cd ~/libcamera
```

```
export GST_PLUGIN_PATH=$(pwd)/build/src/gstreamer
```

```
gst-launch-1.0 libcamerasrc ! 'video/x-raw,width=1920,height=1080' ! videoconvert ! autovideosink
```

TROUBLESHOOT

1. Cannot Allocate Memory

```
[3:45:35.833744413] [6019] INFO RPI raspberrypi.cpp:611 Sensor: /base/soc/i2c0mux/i2c@1/arducam@0c - Selected mode: 5344x4012-pRAA
```

```
[3:45:35.948442507] [6019] ERROR V4L2 v4l2videodevice.cpp:1126 /dev/video14[17:cap]: Unable to request 4 buffers: Cannot allocate memory
```

```
[3:45:35.948551358] [6019] ERROR RPI raspberrypi.cpp:808 Failed to allocate buffers
```

```
ERROR: *** failed to start camera ***
```

Edit **/boot/cmdline.txt** and add **cma=400M** at the end

2. The Image Displays Color Dots

Add code **--denoise cdn_off** at the end of command

```
./libcamera-still -t 5000 -o test.jpg --denoise cdn_off
```

More details: <https://github.com/raspberrypi/libcamera-apps/issues/19>

3. Failed to Install the Driver

The Pivariety V4L2 kernel driver only supports the 5.10 version of Raspberry Pi OS. You can follow ArduCam Doc page to build the drivers for other kernel versions.

4. Failed to import fd 18

If you find the same error, you may make the wrong selection about the graphics driver. Please follow ArduCam Doc page to select the correct graphics driver.

5. Switch to the native camera (raspistill etc.)

Edit the file of **/boot/config.txt**, make **dtoverlay=arducam** change to **#dtoverlay=arducam**

After the modification is completed, you need to reboot the Raspberry Pi.

```
cd libcamera-apps/build
```

NOTE: This camera module support trigger via an external signal, please refer to the Doc page to get the instruction <https://www.arducam.com/docs/cameras-for-raspberry-pi/pivariety/how-to-access-pivariety-og02b10-2mp-color-global-shutter-camera-using-external-trigger-snapshot-mode/>

INTRODUCTION

• About Arducam

Arducam has been a professional designer and manufacturer of SPI, MIPI, DVP and USB cameras since 2012. We also offer customized turnkey design and manufacturing solution services for customers who want their products to be unique.

• About This Pivariety Camera

Arducam Pivariety is a Raspberry Pi camera solution to take the advantage of using its hardware ISP functions. Pivariety camera modules make users get better performance and a wider variety of camera, lens options. In other words, Pivariety breakthrough the limitations of the closed-source official supported camera driver and camera modules (V1/V2/HQ).

Pivariety camera modules made it possible to be well-tuned ISP with Auto Exposure, Auto White Balance, Auto Gain Control, Lens Shading Correction, etc. This series of cameras use the libcamera framework, they can't be supported by Raspistill, and the way to access the camera is libcamera SDK (for C++)/libcamera-still/libcamera-vid/Gstreamer.

This Pivariety OG02B10 Color Global Shutter Camera is migrated Raspberry Pi Cameras, which eliminate rolling shutter artifacts to shoot high-speed moving objects in color sharp images.
